

Annexes

The following twenty-eight annexes provide additional information to the material presented in the main body of this report. Annexes A through Q discuss methodologies for individual source categories in greater detail than was presented in the main body of the report and include explicit activity data and emission factor tables. Annex R analyzes the key sources in this report. Annex S presents a summary of Global Warming Potential values. Annexes T and U summarize U.S. emissions of ozone depleting substances (e.g., CFCs and HCFCs) and sulfur dioxide (SO₂), respectively. Annex V provides a complete list of emission sources assessed in this report. Annex W presents the IPCC reference approach for estimating CO₂ emissions from fossil fuel combustion. Annex X addresses the criteria for the inclusion of an emission source category and some of the sources that meet the criteria but are nonetheless excluded from U.S. estimates. Annex Y provides some useful constants, unit definitions, and conversions. Annexes Z and AA provide a listing of abbreviations and chemical symbols used. Finally, Annex AB contains a glossary of terms related to greenhouse gas emissions and inventories.
